

A grand planter for great challenges – large flower pot Gianto Grande enters the cities!

Our cities deserve more – much, much more! Therefore, we present the latest tool for greening spaces on a larger scale than before. Here is a large flower pot Gianto Grande, model up to 160 cm high!

Large Gianto Grande – another member of the popular family

The latest flower pot from the TerraForm collection was created to meet the needs of European towns, which more and

more miss nature in their spaces. It is the fourth proposal from the line of popular Gianto planters. The [large Gianto Grande pot](#), next to the Classic, [Sito](#) and Tablo models, will certainly be another hit of small urban architecture.

What are the benefits of the Gianto Grande pot?

It is a pot of great opportunities. Although it is characterized by an almost unprecedented size, setting it in the space does not differ from setting the smaller models. All thanks to a special groove in the base – the [large Gianto Grande pot](#), even after planting, can be easily moved to its

destination place with an ordinary pallet truck. Contrary to traditional concrete planters, which often exceed the weight of the Grande model, it is mobile, and also impresses with its colors and solid workmanship. What does it mean? Even more plants without complicated logistics, once in a long time!
