

Zebra Bench as a Stylish and Durable Urban Furniture for Public Spaces

Public benches are essential elements in urban spaces, providing places to rest, socialize, and enjoy the surroundings. However, they often fall into a repetitive, monotonous style, blending into the background rather than enhancing the environment. Our “Zebra” bench seeks to break away from this mold, offering a fresh, eye-catching design that adds character and vibrancy to public spaces. By incorporating unique shapes and customizable colors, the “Zebra” bench transforms seating into a statement piece, enriching urban areas with both functionality and modern aesthetic appeal.

We’re thrilled to introduce our latest project – the “Zebra” bench! Thanks to our collaboration with the Municipality of Barwice (Poland), we’ve created a blue-and-white version that highlights the bench’s distinct character and brings vibrancy to the area it adorns.

Modern Materials and All-Weather Durability

The “Zebra” bench stands out with its durable steel structure, combining elegance with resilience. Made from hot-dip galvanized steel, it is designed to resist corrosion and withstand all weather conditions, making it an ideal choice for urban spaces. The bench also features a powder-coated finish, allowing for a wide selection of colors from the RAL palette, ensuring a long-lasting and aesthetically pleasing appearance.

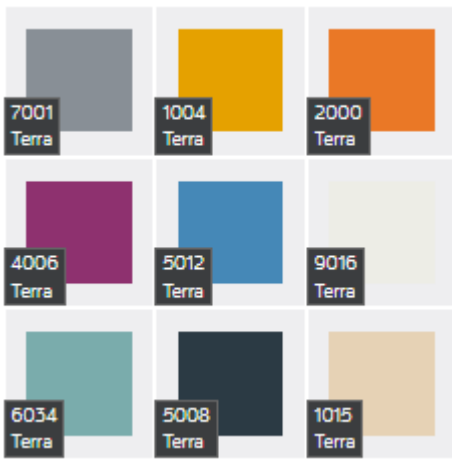

Functionality and Damage Resistance

The “Zebra” bench is a practical solution for public spaces, offering stability and durability with mounting options that anchor it firmly to the ground, enhancing its resistance to mechanical damage. With an option for a smooth or textured finish, users can select a style that best suits their needs and complements the surrounding environment.

Full Customization of Colors

One of the defining features of the “Zebra” bench is its aesthetic flexibility – each slat can be customized in color, allowing the bench to harmonize with its surroundings or create a bold accent that adds character to the public space.

The “Zebra” bench is an ideal choice for cities and public areas looking to enhance their spaces with furniture that combines durability, functionality, and style. Its unique design, sturdy construction, and wide-ranging customization options make it a great addition to any urban or public setting.

The planters shown in the photos are also part of our product line – the Gianto Classic series. These versatile planters are compatible with both our “Zebra” and “Wave” benches, making them an ideal addition to any urban setting. Made from durable polyethylene, the Gianto Classic planters can be color-matched with the benches, allowing for a cohesive, visually appealing look across public spaces. This compatibility in design and color offers a unified, stylish solution for creating inviting, functional urban environments.

colors! <https://www.terracity.eu/en/home-2/>

The “Zebra” benches are also fully compatible with our Cube planter collection, allowing for even more design possibilities in urban spaces. By pairing the Zebra benches with either the Gianto Classic or Cube planters, you can create a harmonious, tailored aesthetic that elevates any public environment. For more details about our Cube planters and their versatile applications, check out the two articles linked below. We invite you to explore how our products work together to enhance urban furniture design!
